

### A Google approach to email.

Gmail is built on the idea that email can be more intuitive, efficient, and useful. And maybe even fun. After all, Gmail has:

- Lots of space**  
Over 7566.612546 megabytes (and counting) of free storage.
- Less spam**  
Keep unwanted messages out of your inbox.
- Mobile access**  
Get Gmail on your mobile phone. [Learn more](#)

### Podešavanja u klijent programu za dopisivanje:

1. Omogućite POP u Gmail-u. Ne zaboravite da kliknete na Sačuvaj promene kada završite.
2. Konfigurirate klijent tako da se podudara sa podešavanjima ispod:

Server dolazne pošte (POP3)	<b>pop.gmail.com</b> Koristi SSL: <b>Da</b> Port: <b>995</b>
Server odlazne pošte (SMTP)	<b>smtp.gmail.com</b> Koristi potvrdu identiteta: <b>Da</b> STARTTLS koristi: <b>Da</b> (neki klijenti ovo nazivaju SSL) Port: <b>465</b> vagy <b>587</b>
Ime naloga:	<b>vaša puna adresa e-pošte</b> (uključujući @gmail.com)
Adresa e-pošte:	<b>vaša adresa e-pošte</b> (username@gmail.com)
Lozinka:	<b>vaša Gmail lozinka</b>

Osim ukoliko ne koristite nedavni režim za preuzimanje pošte na više klijenata, uverite se da ste izabrali opciju da ne ostavljate poruke na serveru. Vaša Gmail podešavanja određuju da li poruke ostaju na serveru, tako da ovo podešavanje u klijentu neće uticati na način na koji Gmail rukuje vašom poštom. Imajte na umu da ako klijent ne podržava SMTP potvrdu identiteta, nećete moći da šaljete poštu putem klijenta koristeći svoju Gmail adresu. Takođe, ako imate problema pri slanju pošte, ali ste u klijentu pošte potvrdili da je šifrovanje aktivno za SMTP, pokušajte da konfigurirate SMTP server na drugi port: 465 ili 587.
